

The next generation of workplace safety

Historically, traditional chemical drug testing methods have been largely adequate to maintain workplace safety. However, recent legislative and societal shifts are requiring employers to rethink if simple substance identification is adequate.

Gaize is shifting the conversation by offering real-time Impairment Detection Technology. Now employers can have certainty that employees are coming to work unimpaired and fit for duty.

When can you screen for impairment?

Screen Prior to the Start of Shift

Have the peace of mind that employees are fit to work. Screen as often as you want to - at shift change, after lunch, or after breaks.

Screen Before Operating Equipment

Your equipment operators should be unimpaired. Now you can know for sure, every day.

Jobsite or Facility Access

Have certainty and confidence that every subcontractor and vendor that enters your jobsite is unimpaired.

Reasonable Suspicion

Confirm in 6 minutes whether an employee is impaired.

Post Incident

Time is of the essence. Know whether impairment is a potential cause of the incident.

Return to Duty

Perform regular impairment screenings as a requirement for employees to return to duty.

What do you do with a “suspected impairment” result from Gaize?

Always perform a confirmatory test and follow your documented procedures.

Consult with your MRO and Legal Counsel to determine appropriate procedural steps when on-the-job impairment is confirmed. Need help developing procedures? Please reach out to us.

Gaize is enabling employers to maintain and improve workplace safety policies, even with evolving drug laws and societal trends.
