# EHS Compliance Planning

Build and maintain forward-looking compliance assurance programs

SOLUTION OVERVIEW

Managing EHS compliance can be challenging, especially for organizations with complex and varied regulatory obligations. To effectively manage compliance, EHS leaders must stay up-to-date with the regulations that impact their operations, understand the requirements, and ensure compliance tasks are scheduled and completed on time.

With a unique combination of regulatory content and easy-to-use software, **Dakota Profiler** helps organizations identify which of the tens of thousands of action-forcing requirements are applicable to their locations, facilities, and pieces of equipment. Its continually updated regulatory database notifies site leaders of relevant changes, helping them maintain accurate Regulatory Registers. Recurring tasks, linked to related citations, can be scheduled to create up-to-date, site-specific Compliance Calendars.
📌 Profiler

- ✔ Determine which regulations apply to your facilities

- ✔ Monitor and proactively address relevant regulatory changes

- ✔ Maintain accurate Legal Registers for ISO Certifications

- ✔ Provide clarity with links to a plain-language Regulatory Library

- ✔ Schedule recurring tasks against site and company requirements

Why Dakota?

Onboard Regulatory Content

Fueled by an integrated regulatory database, **Dakota Profiler** helps organizations address local compliance while synchronizing global EHS programs. This plain-language library covers U.S. EPA, OSHA, DOT, and other agencies and drives ongoing compliance by clarifying complex subject matter and notifying site leaders of relevant regulatory changes.

Dakota's in-house analysts continually refine and enrich the Regulatory Database ensuring your site staff are informed of relevant changes.

Identify all regulatory obligations

Leveraging Dakota's Regulatory Database, Profiler's *Decision-Tree-Logic^{SM,}* uses yes−no questions to guide users in the creation of site-specific Compliance Profiles. Local requirements, permits, and organizational policies can be added by users and international requirements are available through Dakota's regulatory partners.

Plan recurring compliance tasks

Grouped by regulatory domain, tasks can be created for each regulation that applies to a facility. Profiler keeps track of the citations included in your tasks so you can be assured that your compliance plans are comprehensive. Task occurrences can be tracked and analyzed in **Dakota Tracer,** providing a holistic view of enterprise-wide compliance.

Stay informed as regulations change

To help you prepare for coming changes, Profiler sends Regulatory Alert emails whenever relevant changes are published in the Federal Register. Each month, as Dakota's regulatory database is updated, Profiler uses visual indicators to highlight specific regulatory changes and prompt review of affected applicability responses and related compliance tasks.
